SUMMARY

Backend Developer with 2+ years of experience building high-throughput, event-driven systems across logistics and compliance platforms. Specialized in API design, third-party integrations, and performance optimization, with proven impact on latency reduction and system scalability. Primarily working with Node.js and NoSQL systems, I take end-to-end ownership of features

WORK EXPERIENCE

Meel

Jun. 2025 – Current

Backend Developer | TypeScript, Node.js, Express, Firebase Cloud Functions, Firestore

- Took ownership of backend architecture and API design for a logistics platform, building scalable services across orders, routes, invoices, and admin systems
- Built **commerce integrations (Salla, Zid, WooCommerce)** with webhook pipelines, designed for reliable synchronization under burst traffic conditions
- Developed **Zoho Books integration suite** (OAuth/token lifecycle, contacts, sales orders, invoices), enabling automated invoice generation and seamless **financial data synchronization**
- Designed high-throughput backend systems supporting **1,000+ daily orders**, validated through load testing and performance benchmarking
- Designed event-driven notification system (Email/WhatsApp/SMS/FCM) with idempotency and queue-based dispatch, **validated reliability for ~5k notifications/day under load**
- Engineered bulk order ingestion pipeline (CSV/Excel) with validation and preview workflows, reducing manual processing time and data errors
- Implemented **geospatial and AI route optimization features**, including reverse geocoding, distance/time computation, ETA extraction, and real-time route orchestration.
- Improved API response times by ~30% using **query optimization, indexing, and caching strategies**, reducing latency for critical endpoints

iComply Lifescience Solutions

Jun. 2023 – Jun. 2025

Backend Developer | PHP, MySQL, AWS, nginx, Python

- Designed and implemented the NCO (Non-Conformance) backend module, handling complex relational workflows across deviation, action items, RCA, and CAPA entities
- Developed **dynamic PDF reports** using PHP and MySQL as well as NodeJS, leveraging **domPDF, html-pdf-node packages** to generate CAPA plan reports by embedding data from the database.
- Implemented **JWT authentication** to enhance security and streamline access control for the backend systems.
- Orchestrated a Python (Django) powered **microservice for automated email notifications** triggered by pivotal backend events, achieving 99% uptime through optimized error handling and monitoring.
- Engineered complex SQL queries leveraging **joins, unions, subqueries, and indexing** to optimize database performance and optimized critical queries from **12s to under 500ms**

MoLog Media and Advertising

Apr. 2022 – Jun. 2022

Full Stack Developer Intern | Python, Flask, Javascript

- Led the migration of Molog's Soham-ngma product to **AMP (Accelerated Mobile Pages)**, resulting in a **50% reduction in page load times** and significantly improving mobile user experience.

PROJECTS

Chingu Rooms | *JavaScript, Express, React, MongoDB, NodeJS*

[Deployment Link](#)

- Spearheaded a team of 4 developers in the construction of a full-stack hotel booking website, under a **training program offered by University of Helsinki**. [Certificate Link](#)
- Designed backend services handling user sessions, bookings, and payments (simulated), improving system reliability and modularity

SKILLS & INTERESTS

- **Languages:** JavaScript, TypeScript, Python, SQL, PHP
- **Backend:** Node.js, Express, Django, Flask
- **Databases:** MySQL, PostgreSQL, MongoDB, Firestore
- **Cloud & DevOps:** AWS (EC2, S3), Docker, Firebase, GCP
- **Tools:** Git, Linux, Nginx

EDUCATION

Veer Surendra Sai University of Technology

2020 - 2024

B.Tech, Electrical and Electronics Engineering

7.55 CGPA
